

	Excellent	Very Good	Good	Acceptable	Insufficient
Abstract (5 marks)	Gives extremely clear, self-contained, concise summary of methods and findings. Provides compelling real world motivation, showing deep understanding of context within the state of the art. (≥3.5 marks)	Clear, concise summary of methods and findings. Puts research in context of the state-of-the-art well and provides good motivation. (≥3 marks)	Summary of methods and findings is relatively clear. Some attempt made to motivate research or putting it into the context of the state of the art though perhaps slightly lacking. (≥2.5 marks)	Basic summary of methods and findings though lacking clarity. Does not put research in context. (≥2 marks)	Lacking clear summary of methods and findings. Irrelevant information included or mention of methods/findings that are not actually performed in the attached analysis. (0-1.5 marks)
Introduction (10 marks)	Demonstrates deep understanding of the background to the problem and provides very convincing motivation to the problem. Clearly outlines a coherent set of research objectives based on the above and an innovative set of steps to achieve them. (≥7 marks)	Demonstrates very good understanding (though perhaps lacking depth) of the background to the problem and provides logical motivation. Defines a logical set of objectives to achieve the above aims. (≥6 marks)	Demonstrates good understanding for the most part of the background to the problem and provides some motivation. Defines a set of objectives to achieve the above aims though perhaps missing a one or two logical steps to achieve aims (e. g. Aim: To understand age distribution of particular group; logical step missing: Histogram of age variable for group). (≥5 marks)	Demonstrates some understanding of the background to the problem and provides basic motivation, though perhaps not very convincing. Defines a set of objectives though missing more than two basic steps and the set of steps to achieve them. (≥4 marks)	Completely lacking understanding of the background to problem with very little to no convincing motivation provided. Provides very limited, if any, set objectives or does not describe the steps used to achieve these objectives. (0-3.5 marks)
Related Work (15 marks)	Demonstrates deep understanding of literature. Compares and contrasts existing research and highlights the novelty of the proposed approach. (≥10.5 marks)	Demonstrates very good understanding of literature (but perhaps lacks knowledge of the most important papers in the field). Compares and contrasts existing research with proposed approach. (≥9 marks)	Demonstrates good understanding of literature for the most part, though perhaps only surface level at times. Some attempt made to compare and/contrast existing research with proposed approach. (≥7.5 marks)	Demonstrates some understanding of literature though very surface-level. Limited attempt made to compare and/contrast existing research with proposed approach. (≥6 marks)	Demonstrates very little understanding of literature and/or refers to irrelevant literature. No attempt made to compare and/contrast existing research with proposed approach. (0-5.5 marks)
Methodology (10 marks)	Novel analysis/method (compared to existing literature) proposed to address real-world application. Very clear description of methods that demonstrates thorough understanding of techniques proposed. (≥7 marks)	Some novelty to analysis proposed to address real-world application. Clear description of methods that demonstrate a good understanding of techniques used. (≥6 marks)	Comprehensive discussion of method used. These methods may only demonstrate very limited novelty but the description at least demonstrates a good understanding of techniques applied. (≥5 marks)	Basic discussion of methods used. No real novelty to analysis with basic understanding of the techniques applied - though perhaps surface level at times. (≥4 marks)	Very limited / no discussion of methods used. No novelty and a lack of basic understanding of the techniques applied. (0-3.5 marks)
Experimental Setup (20 marks)	Demonstrates exceptional levels of rigour in experimental design (e.g. discussion of confounding variables, multiple layers of complexity to analysis, comparisons to published baselines in the literature etc.). - Approach to experiments clearly motivated by existing literature and well reasoned. (≥14 marks)	Generally demonstrates rigour in experimental design. Approach to experiments is logical and well-reasoned. (≥12 marks)	Good structure to experiments overall. Approach to experiments is logical and well-reasoned. (≥10 marks)	Basic experimental structure though perhaps lacking rigour/ logical motivation at times. (≥8 marks)	Experimental structure lacking any rigour or logical motivation. (0-7.5 marks)
Results (25 marks)	Results demonstrate and discuss novel findings using well-reasoned evaluation measures. (≥17.5 marks)	Results and following discussion are interesting, with perhaps some novelty and use well-reasoned evaluation measures. (≥15 marks)	Discussion is good with some interesting results along with the use of generally appropriate evaluation measures. (≥12.5 marks)	Some interesting results and discussion. Evaluation measures generally appropriate - perhaps with some improvements that could be made. (≥10 marks)	Evaluation completely inappropriate. Little to no discussion on interpretation of the results of experiments. (0-9.5 marks)
Conclusion & Future Work (5 marks)	Novel and insightful conclusions drawn from analysis. Discussion grounded in the context of the literature and suggestions for future directions provided. (≥3.5 marks)	Insightful conclusions with perhaps some novelty drawn from analysis. Discussion grounded in the context of the literature and some suggestions for future directions provided. (≥3 marks)	Insightful conclusions drawn grounded in the context of the literature, though only on a very surface level. Some suggestions for future directions provided. (≥2.5 marks)	Some insightful conclusions drawn though not grounded in the context of the literature. Some limited suggestions for future directions. (≥2 marks)	No conclusions are drawn at all or conclusions are not based on evidence provided in the analysis. Little to no suggestions for future directions discussed. (0-1.5 marks)
Ethical Considerations (10 marks)	Thorough, multifaceted discussion on ethical considerations grounded in AI ethics literature where appropriate. (≥7 marks)	Thorough discussion on ethical considerations grounded in AI ethics literature where appropriate. (≥6 marks)	Thorough discussion on ethical considerations though perhaps missing some obvious ethics literature on the topic. (≥5 marks)	Some discussion on ethical considerations though perhaps missing some obvious ethics literature on the topic. (≥4 marks))	Little to no meaningful ethical issues considered. (0-3.5 marks)
